

Ketley Heritage Trail 2

We left school and turned right. We walked through the area called The Riddings. There used to be rows of worker's cottages here, but we couldn't see the remains as it was too overgrown.

We followed the path where the old railway line used to be. Local people called the train, The Ketley Dodger.

Parker's Pool used to be used by the Newdale Foundry.

Thomas Parker used to live here in what is now called Parker's Cottage. He invented the first electric car and designed the Manchester tram ways.

We found out at one point there was a windmill in Ketley.

We ended the walk at the Ironworks and the old railway tracks.
